EXPERIENCE

Software Engineer

Pune

[Anchanto Services Pvt Ltd \(SaaS Products For E-commerce Businesses\)](#)

01/2024 - Present

- Built around **20 microfrontend components** using **bit.cloud**, to replace common components across the applications.
- Led the end-to-end development and successful launch of a Transportation Management System (TMS) from scratch**, aligning the product with business goals and improving operational efficiency.
- Designed and implemented a scalable, multi-tenancy frontend architecture for a single codebase, supporting **10+ tenants** and reducing deployment time by **30%**.
- Implemented common software development principles like DRY, SOLID, YAGNI, KISS, etc.
- Mentored 3 junior developers, providing guidance on effective frontend development strategies which resulted in a 30% productivity increase within the team.

Frontend Developer

08/2022 - 01/2024

- Orchestrated the frontend development of a two scalable e-commerce platform, achieving a **99.99% uptime**.
- Identified and eliminated over 15 redundant API calls, **reducing total API response time** from 10-15 seconds to 2-5 seconds, thereby enhancing application performance.
- Conducted comprehensive **testing and debugging with Cypress**, resulting in a 40% reduction in application errors and improved stability.
- Integrated CSAT and NPS surveys using Product Fruit, gathering real-time feedback and analytics that led to a **10% reduction in support requests and onboarding of 80 new users**.
- Conducted performance, load, and stress tests on the Open API using JMeter to pinpoint API bottlenecks and assess 0% errors.
- Achieved a **40% reduction in bundle size** through code splitting, significantly **decreasing React build time and improving load performance**.
- Developed and maintained a robust component library with **React patterns and styled components**, ensuring consistent UI/UX across multiple applications.
- Engaged in Scrum methodologies, handling over 25 user stories, fostering team communication, and actively contributing to sprint planning, stand-ups, retrospectives, and demos.
- Expertise in OAuth, lazy loading, optimized state management, internationalization (i18n), code splitting, debouncing, throttling, styled components, server-side rendering (SSR), memoization, custom hooks, API optimization, and pagination techniques.
